

**FLYSCREENS**

The IFRAME flyscreens are a revolutionary product. You now have the ability to screen openings up to 7.6 m wide and 3.2 m tall. Installing screens means you can leave your doors open more often, increasing ventilation and reducing air-conditioner use.

The insect screen and sun filter fabrics prevent insects entering the home and provide solar control. Screens are protected from damage, dust or dirt as they completely retract inside the doorjamb when not in use.

Max frame size

Single function system:

option 1 – screen from the right or left
